PROFILE

Computer Engineering graduate from the University of Toronto with an MSc in Computer Science from Western University (GPA 4.0/4.0). Focused on causal quantitative research, portfolio construction, risk controls, and auditable execution systems, with additional experience in distributed databases and machine learning.

CORE COMPETENCIES

Point-in-Time Data | Walk-Forward Validation | Portfolio & Risk Controls | Python / C++ / SQL | IBKR Paper Trading | Data & Source Auditing

RESEARCH & ENGINEERING EXPERIENCE

Independent Quantitative Research

Mar 2026 - Present

Quantitative Researcher / Strategy Engineer

London, Ontario

- Built a causal, regime-aware U.S. equity research framework covering point-in-time data checks, next-session execution, chronological validation, market-state inference, transaction costs, and drawdown controls.
- Upgraded Golden Finger into the P8 multi-sleeve paper-trading system, coordinating weekly stock selection with sector and cross-asset allocation while enforcing integer sizing, capital checks, and exposure limits.
- Engineered immutable strategy specifications, append-only no-backfill intents, SHA-256 source receipts, completed-session IBKR closes, scheduled pre/post-close workflows, reports, and dashboards; the P8 cutover regression suite passed 154 tests with zero failures.

University of Toronto Far Data Lab

Sep 2023 - Jun 2025

Research Assistant - Distributed Systems

Toronto, Ontario

- Deployed disaggregated TiDB on CloudLab, automated TPC-C experiments with Python and Bash, and used Prometheus, Grafana, and eBPF/BCC to analyze throughput, latency, and cross-layer overhead.

Western University DB Lab

Jan 2026 - Present

Research Assistant - Private Data Management

London, Ontario

- First author of "Soft Voting for Policy-Aware Private Data Synthesis," submitted to EDBT 2027 Research, third round (Paper 286).

Coca-Cola Beverages

Sep 2021 - Aug 2022

Data Engineer Intern - BI Team

Shanghai, China

- Built data pipelines and reporting automation with Azure Databricks, PySpark, and SQL, and supported operational analysis through Power BI dashboards.

SELECTED QUANTITATIVE PROJECTS

Golden Finger / P8 - Auditable IBKR Paper Portfolio System

Historical backtest across 151 weekly points: 58.76% CAGR, 3.291 Sharpe, and 5.79% maximum drawdown. The portfolio combines weekly Golden Finger stock selection with sector and cross-asset allocation, integer sizing, capital checks, and exposure controls.

Python, IBKR Paper Trading, SQLite, Point-in-Time Data, SHA-256

Quantitative Equity Research & Portfolio Model

Implemented 34 expanding walk-forward folds across 883 out-of-sample dates, integrating causal features, state probabilities, next-open portfolios, transaction costs, and fail-closed data-quality gates. Historical-unseen backtest: 61.83% CAGR, 2.659 Sharpe, and 7.08% maximum drawdown.

Python, HMM, Ridge, LightGBM, Walk-Forward Validation

EDUCATION

Bachelor of Applied Science in Computer Engineering University of Toronto — Jun 2025

Algorithms, operating systems, computer networks, machine learning, databases, and software design

Master of Science in Computer Science - GPA 4.0/4.0 Western University — Sep 2026

Machine learning, deep learning in computer vision, databases, data management, and information visualization

TECHNICAL SKILLS

Programming & Data: Python, C, C++, SQL, Bash, SQLite, PySpark
Quantitative Research: Point-in-Time Data, Walk-Forward Validation, HMM, Ridge, LightGBM, Backtesting, Risk Controls
Research Engineering: IBKR Paper Trading, Schema Validation, Reproducible Experiments, SHA-256 Provenance, Git, Linux
Systems & Machine Learning: TiDB, CloudLab, GCP, Azure Databricks, eBPF/BCC, Prometheus, Grafana, PyTorch
